# 1. Directors Certification Of Default Price-Quality Path Compliance Statement

We, Ian F. Kearney and Christopher I. M. Turner, being directors of Network Tasman Limited, certify that, having made all reasonable enquiry, to the best of our knowledge and belief, the attached Annual Compliance Statement of Network Tasman Limited, and related information, prepared for the purposes of the *Commerce Act (Electricity Distribution Default Price-Quality Path) Determination 2010* are true and accurate.

Ian F Kearney

•

Christopher IM Turner

Chairman of Directors

Director

Dated: 11<sup>th</sup> of June 2012

# 2. Default Price Path Compliance Statement

### a). Background

Network Tasman Limited is a *Non Exempt Electricity Distribution Business* as defined in section 54G of the Commerce Act 1986 and consequently is subject to Default Price-Quality regulation. This statement provides an assessment of Network Tasman's compliance with the requirements of the *Electricity Distribution Services Default Price-Quality Determination 2010* for the year to 31 March 2012.

#### b). Information

The audited information which follows, including the:

- notional revenue (Appendix 1)
- allowable notional revenue (Appendix 2)
- network base quantity information (Appendix 3)
- network revenue and pricing information (Appendices 4,5 & 6)
- pass through cost information (Appendix 7)

has been prepared specifically to comply with the requirements of Clause 8 of the Commerce Act (Electricity Distribution Default Price-Quality Path) Determination 2010.

### c). Compliance

Network Tasman Limited *fully complies with the default price pathway* requirements specified in Clause 8 of the *Commerce Act (Electricity Distribution Default Price-Quality) Determination 2010* for the year to 31 March 2012. The following test confirms NTL's compliance:

#### Test: Clause 8.4

The Maximum Notional Revenue ( $NR_{2012}$ ) of a Non-exempt EDB at any time during the Assessment Period in the year to 31 March 2012 must not exceed the Allowable Notional Revenue ( $R_{2012}$ ) under the CPI-X price pathway for the Assessment Period ending 31 March 2012:

This test confirms Network Tasman Limited has complied with the Default Price Path; actual Maximum Notional Revenue for the year was \$296,680 *less* than the Allowable Notional Revenue *as at 31 March 2012*.

The supporting evidence for Tests 1 & 2 above is provided in Appendices 1-7

#### d). Notional Revenue

Notional Revenue used in the price pathway calculations includes all revenue NTL derives from supply of the following controlled, non-contestable line function services:

 Electricity conveyance services provided under Use of Systems Agreements with electricity retailers

- Electricity conveyance services provided under Direct Connection Agreements with major electricity consumers and embedded electricity generators
- Network development levies and connection charges applied to new electrical loads at the time of their connection to Network Tasman Limited's distribution network.

### e). Pass Through Costs

For the purpose of the Default Price Path calculations, pass through costs include:

- i) Transmission
  - Connection charges
  - Interconnection charges
  - New Investment charges
  - Avoided transmission charges paid to embedded generators
- ii) Rates & Electricity Authority and Commerce Act Levies
  - Local Authority rates levied on NTL's systems fixed assets including lines, cables, electrical equipment and substation land and buildings.
  - Electricity Authority regulatory costs allocated to EDB's under an industry levy formula determined by government.
  - Commerce Act levies for the funding of Commerce Commission EDB regulatory activities that are allocated to EDB's under an industry levy formula determined by government.

# 3. Default Quality Standards Compliance Statement

#### a) Information

The audited information attached for the:

- Interruption duration index (SAIDI) assessment (Appendix 8)
- Interruption frequency index (SAIFI) assessment (Appendix 8) was prepared specifically to comply with the requirements of Clause 9 of the Commerce Act (Electricity Distribution Default Price-Quality Path) Determination 2010.

#### b) Compliance

The quality standards assessments for SAIDI and SAIFI below demonstrate that for the year to 31 March 2012, Network Tasman's:

- Assessed SAIDI value has not exceeded the SAIDI Limit
- Assessed SAIFI value has not exceeded the SAIFI Limit

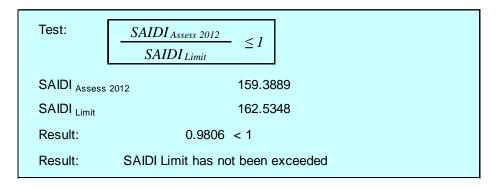

calculated in accordance with Clause 9.2 of the *Commerce Act (Electricity Distribution Price-Quality Path) Determination 2010.* 

Under the Default Price-Quality Path Determination commencing 1 April 2010, an ELB complies with the default quality standards where it records not more than one non-compliance outcome in any three consecutive compliance assessments for SAIDI and for SAIFI.

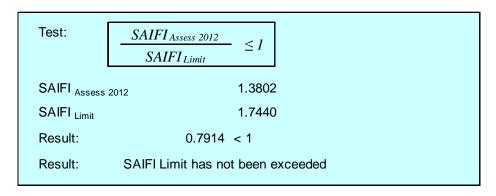

Network Tasman's compliance history recorded below for the two years to 31 March 2012 confirms NTL is not in breach of either of the quality standards as 31 March 2012.

|      | SAIDI                | SAIFI                |
|------|----------------------|----------------------|
| 2011 | Exceeded limit       | Did not exceed limit |
| 2012 | Did not exceed limit | Did not exceed limit |

### Clause 9.2 Interruption Duration (SAIDI Classes B&C)

#### Clause 9.2 Interruption Frequency (SAIFI Classes B&C)

The supporting evidence for these SAIDI and SAIFI tests is provided in Appendix 8.

#### c) Network Tasman SAIDI & SAIFI Policies and Procedures

Network Tasman is required under Clause 11.1(b) (v) of the Commerce Act (Electricity Distribution Price-Quality Path) Determination 2010 to describe the policies and procedures used to record the SAIDI and SAIFI statistics for the Assessment Period ending 31 March 2012. This information is provided in Appendix 9.

### 4. Disclaimer

The information disclosed by Network Tasman Limited in this Default Price-Quality Path Compliance Statement has been prepared solely for the purposes of complying with the requirements of the Commerce Act 1986 and the Commerce Act (Electricity Distribution Default Price-Quality Path) Determination 2010.

The information disclosed relates only to those lines business activities covered by the Determination. NTL is involved in other activities that are not required to be reported on under the Determination.

The information has not been prepared for any other purpose than that required by the Determination and Network Tasman Limited expressly disclaims any liability to any party who may rely on this information for any other purpose.

Dated: 11<sup>th</sup> June 2012.

# 5. Independent Audit Report

# **AUDIT NEW ZEALAND**

Mana Arotake Aotearoa

#### Independent Auditor's Report

# To the readers of the annual compliance statement of Network Tasman Limited for the assessment period ended on 31 March 2012

The Auditor-General is the auditor of Network Tasman Limited (the company). The Auditor-General has appointed me, John Mackey, using the staff and resources of Audit New Zealand, to provide an opinion, on her behalf, on the company's Annual Compliance Statement for the assessment period ended on 31 March 2012 on pages 2 to 4 and 7 to 17 regarding compliance with the Commerce Act (Electricity Distribution Default Price-Quality Path) Determination 2010.

We have audited the Annual Compliance Statement in respect of the default price-quality path prepared by the company for the assessment period ended on 31 March 2012 and dated 11 June 2012 for the purposes of clause 11 of the Commerce Act (Electricity Distribution Default Price-Quality Path) Determination 2010 ("the Determination").

### Directors' Responsibilities

The Directors of the company are responsible for the preparation of the Annual Compliance Statement in accordance with the Determination and for such internal control as the Directors determine is necessary to enable the preparation of an Annual Compliance Statement that is free from material misstatement, whether due to fraud or error.

#### **Auditor's Responsibilities**

Our responsibility is to express an opinion on the Annual Compliance Statement based on our audit. We conducted our audit in accordance with the New Zealand Institute of Chartered Accountants Standard on Assurance Engagements 3100: Compliance Engagements. This standard requires that we comply with ethical and quality control requirements and plan and perform the audit to obtain reasonable assurance about whether the Annual Compliance Statement has been prepared in accordance with the Determination and is free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the Annual Compliance Statement. The procedures selected depend on the auditor's judgement, including the assessment of the risks of material misstatement of the Annual Compliance Statement, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation of the Annual Compliance Statement in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control.

In relation to the price path set out in clause 8 of the Determination, our audit included examination, on a test basis, of evidence relevant to the amounts and disclosures contained on pages 3 to 4 and 7 to 13 of the Annual Compliance Statement.

In relation to the SAIDI and SAIFI statistics for the Reference Period and the Assessment Period ended on 31 March 2012, including the calculation of the Reliability Limits and the Assessed Values, which are relevant to the quality standards set out in clause 9 of the Determination, our audit included examination, on a test basis, of evidence relevant to the amounts and disclosures contained on pages 3 to 4 and 14 to 15 of the Annual Compliance Statement.

Our audit also included assessment of the significant estimates and judgments, if any, made by the company in the preparation of the Annual Compliance Statement and whether adequate information has been disclosed in accordance with clause 11.1(b) of the Determination.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

### Limitations and Use of this Independent Auditor's Report

This independent auditor's report has been prepared solely for the Directors of Network Tasman Limited and the Commissioners of the New Zealand Commerce Commission in accordance with the Determination. We disclaim any assumption of responsibility for any reliance on this report to any persons or users other than the Directors of Network Tasman Limited and the Commissioners, or for any purpose other than that for which it was prepared.

Because of the inherent limitations in evidence gathering procedures, it is possible that fraud, error or non-compliance may occur and not be detected. As the procedures performed for this engagement are not performed continuously throughout the assessment period and the procedures performed in respect of the company's compliance with the Determination are undertaken on a test basis, our engagement cannot be relied on to detect all instances where the company may not have complied with the Determination. Our opinion has been formed on the above basis.

#### Independence

We have no relationship with, or interests in the company other than the audit of the financial statements for the year ended 31 March 2012.

#### Opinion

In our opinion, the Annual Compliance Statement of Network Tasman for the Assessment Period ended on 31 March 2012, has been prepared, in all material respects, in accordance with the Determination.

Our audit was completed on 11 June 2012 and our opinion is expressed as at that date.

0

John Mackey Audit New Zealand On behalf of the Auditor-General Christchurch, New Zealand

## Appendix 9.

### RELIABILITY RECORDING POLICIES and PROCEDURES

For the purposes of compiling annual SAIDI and SAIFI data:

- a high voltage outage on the distribution network is defined as an event resulting in loss of supply to any number of consumers for a duration of more than one minute
- only outages resulting from de-energisation of any high voltage feeder or conductor(6.6kV and above on NTL's network) are included in SAIDI & SAIFI statistics. Outages stemming from low voltage equipment are excluded.
- both planned and unplanned events are included within high voltage outage statistics
- all high voltage outages are managed through Network Tasman's control room by a qualified Network Tasman System Operator
- the faults and maintenance contract between the company and its faults contractor,
   Delta, obligates both parties to manage all outage events centrally through the System Operator located in NTL's control room.
- All HV fault switching operations are recorded by the System Operator in the control room log at the time the activity takes place. This provides a detailed record of the switching events for future reference.

Customers affected by operation of a distribution system high voltage protection device can be divided into:

- 1. Those within the core fault area (i.e. who won't have supply restored until the necessary line repairs are completed)
- 2. Those outside the immediate fault area (i.e. who can have power restored through coordinated switching activity)

To calculate the customer minutes lost under each fault event, each event is approximated as a maximum two step restoration process. This is in keeping with the philosophy of fault restoration which relies on the following a sequential process for supply restoration:

- 1. Identification, isolation and minimisation of the core fault area.
- 2. Restoration, through switching, of supply to areas not immediately within the core fault area
- 3. Making repairs and restoration of the core fault area.

The switching and recording process is managed by a NTL System Operator using NTL's Geographical Information System (GIS). To record outage data the operator draws geographical selection polygons around all sections of the high voltage line affected by the fault event. The software is then used to select and identify all the distribution transformers within the fault area. A query is then made into NTL's customer connection database to find and list all customers connected to those transformers affected by the fault event.

This data is then used in the following formula to calculate the total customer minutes for a fault event:

Total No. of customers initially affected  ${\bf x}$  (Time Unfaulted Area restored – Time of Initial Interruption)

No. of Fault area customers **x** (Time Fault Area restored – Time Unfaulted Area restored)

Planned and unplanned events use essentially the same recording process however by nature, planned interruptions can be identified to a set of consumers within a known area in advance.

The total customer minutes for a planned interruption are thus calculated using the following formula:

The system operator records details of all outage events in the NTL Outage Database. This is an access database that remains on line in the control room. Each planned or unplanned event forms a one record entry into the database. The Outages Database is subject to NTL's normal electronic file backup and security protocols.

The Outage Database records the following data fields for each event:

- 1. Date
- 2. ID number of the protective device that has operated (allows identification of the HV feeder and area affected)
- 3. Area: (Text description of area affected)
- 4. Description; (Text description of fault cause and type recorded once known)
- 5. Outage type (Planned Shutdown or Fault)
- 6. Area Class (Urban or Rural)
- 7. Fault Class (Overhead or Underground)
- 8. Fault Voltage (6.6kV, 11kV, 33kV)
- 9. Outage Region (Stoke, Motueka, Golden Bay, Kikiwa, Murchison)
- 10. Time of Initial Interruption
- 11. Time Unfaulted Area Restored
- 12. Time Fault area restored
- 13. Customers (ICP's) in Total Area (recorded post event)
- 14. Customers (ICP's) in Fault area (recorded post event)

Unless otherwise stated all data is recorded on line by the NTL System Operator at the time of the event.

The outage database is queried on an as needed basis by NTL's Network and Operations Managers and summary outage statistics are prepared and provided to NTL's CEO and Board of Directors on a monthly basis. Annual outage statistics are prepared and independently audited for regulatory reporting purposes. The summary statistics are recorded on a cumulative basis and are used for comparative analysis and form a key input into NTL annual Asset Management Planning process. Annual data is also reported against NTL's SCI reliability targets. These targets are negotiated annually with the Network Tasman Trust.

# Matters relating to the electronic publication of the annual compliance statement prepared under the Commerce Act (Electricity Distribution Default Price-Quality Path) Determination 2010

This audit report relates to the electronic publication of the annual compliance statement prepared under the Commerce Act (Electricity Distribution Default Price-Quality Path) Determination 2010 (the "annual compliance statement") of Network Tasman Limited (the company) for the assessment period ended on 31 March 2012.

We have not been engaged to report on the integrity of any website on which the annual compliance statement has been published. We accept no responsibility for any changes that may have occurred to the annual compliance statement since it was initially approved and published.

This audit report refers only to the annual compliance statement named above. If readers of this audit report are concerned with the inherent risks arising from electronic data communication they should refer to the original published hard copy of the annual compliance statement and related audit report dated 11 June 2012 to confirm the information included in the annual compliance statement published on this website.
